Carestream DENTAL

INSIGHT

Minimize exposure. Maximize results.

The standard for intraoral film. With INSIGHT dental film, you'll get a true F-speed film that requires up to 60% less radiation per exposure.

- Delivers excellent and consistent image quality through T-Grain emulsion technology.
- Lowers patient and staff radiation exposure without sacrificing image resolution.
- Needs no continual equipment adjustments to accommodate processing conditions.
- Holds speed and contrast in variable chemistry conditions.
- Is available in all intraoral film sizes and formats, including ClinAsept barrier packets for added safety.

Exposure Guidelines

General D-speed film users		General E-speed film users	
Automatic processing	Reduce exposure time 60%*	Automatic processing	Reduce exposure time 20%*
Manual processing	Reduce exposure time 50%*	Manual processing	Reduce exposure time 20%*

*Reduce exposure time only. Do not change mA or kVp settings. To fine tune image – check exposure recommendations inside box.

For best results, use with READYMATIC, READYPRO, or GBX processing chemicals. INSIGHT dental film processes as an F-speed film when processed in roller transport automatic processors; on the high-end of E-speed range when processed manually.
