DRYVIEW DVM Mammography Laser Imaging Film

Precision Imaging for Mammography

SEE THE DIFFERENCE. EXPERIENCE THE CONFIDENCE. CHOOSE DRYVIEW DVM.

Building on the trusted reliability and precision of DRYVIEW Laser Imaging Film, DRYVIEW DVM Film is specifically designed to meet the demanding standards of mammography. DRYVIEW DVM Film delivers consistently clear, high-density images and sharp image rendition supporting excellence in mammography imaging and patient care. Thanks to its extended shelf life the film supports efficient inventory management, helping to optimize film usage and maintain a reliable film supply.

This infrared-sensitive film is designed for use with CARESTREAM DRYVIEW Laser Imaging Systems and is compatible with a wide range of mammography-specific modalities, including Full Field Digital Mammography (FFDM) and CR-Mammography. DRYVIEW DVM Mammography Laser Imaging Film produces images with a cool blue tone and a wide dynamic range, which ensures highly consistent image contrast empowering you and your staff to make confident diagnoses.

Advantages At a Glance

- **High Dmax Image Density** Ensures crisp, high-contrast images ideal for visualization of fine detail.
- **Cool Blue-Tone Film Advantage** Enhances image visibility and reduces eye fatigue.
- **Simple film reloading** DRYVIEW Laser Imaging film cartridges load easily in full light and use minimal packaging.
- **Consistent Performance with Low maintenance** DRYVIEW Laser Imagers does not require frequent cleaning of film's exposure area due to dust or lint.
- **Efficient Film Management** Extended shelf life of DRYVIEW DVM film helps optimize inventory and reduce waste.

Simple Daylight Loading

Replace an empty cartridge or switch to a new film size in 3 easy steps.

1. Ensure the pause symbol is off, open door and remove old film cartridge
2. Slide the new film cartridge into place
3. Close door and check screen to confirm status

Environmental & Social Performance

Carestream cares about meeting the needs of our customers by providing innovative solutions and outstanding experiences, running efficient operations that minimize environmental impacts, and managing our activities in a socially responsible manner. The dry laser imaging technology eliminates the need for wet processing chemical development decreasing impact on the environment. Additionally, Carestream has adopted the use of corrugated trays for packaging in some of our DRYVIEW products that can be recycled, where appropriate, helping to decrease landfill waste.

DRYVIEW DVM Mammography Laser Imaging Film Specifications

Three film sizes for a range of imagers and applications

Choose from three film sizes on 7-mil polyester base to satisfy your department image size needs.

- 11 x 14 in. (28 x 35 cm.)
- 10 x 12 in. (25 x 30 cm.)
- 8 x 10 in. (20 x 25 cm.)

**Availability of film types and sizes is country dependent.*

System-matched to boost productivity

- DRYVIEW DVM Film is system-matched with DRYVIEW Laser Imagers to enable Automatic Image Quality Control (AIQC).
- AIQC calibrates DRYVIEW Laser Imagers to optimize quality – and to help ensure that contrast and density meet preset user preferences.
- This quality control is performed with no operator intervention, enhancing productivity.

Storage and handling of film

- Just like other photographic films or data-storage materials, DRYVIEW DVM Film requires reasonable care during storage and handling. Store unexposed film at 4–24 °C (39–75 °F), at 30–50 % RH, and properly shielded from x-rays, gamma rays, or other penetrating radiation in order to achieve consistent results up to the expiration date indicated on the film package.
- Tests under ISO (International Standards Organization) methods indicate processed DRYVIEW DVM Film is archivable for 100+ years when stored at ISO-recommended maximum temperature 16–27 °C (50–80 °F), and at 30–50 % RH far exceeding requirements for oncology and pediatric applications. Keep processed film in a cool, dry place that is properly shielded from penetrating adiation and chemistry fumes.
