Carestream DENTAL

ClinAsept

Carestream Dental Films with a ClinAsept Barrier

INSIGHT and Ultra-speed films with a ClinAsept Barrier have a built-in barrier to help manage infection control. Each intraoral packet is encased in a clear barrier that guards the film packet against contaminants that may be present in oral fluids. Use these products to minimize the risk of cross-contamination in your office.

Minimize Cross-Contamination and Maximize Confidence

For real time savings and peace of mind, use INSIGHT or Ultra-speed film packets with ClinAsept barriers. Available in single- or double-film format, for size 2 and single-film format for size 0. Each packet comes safely prepackaged with its own barrier. You don't have to do anything extra before taking the radiograph, except feel confident that the risk of cross-contamination in the darkroom is minimized.

Get in Touch Today

Make INSIGHT or Ultra-speed film packets with ClinAsept barriers part of your key infection control practices. For speed and convenience, they're a real plus in your dental practice.

How to use prepackaged films with barriers
